

How Grid Control runs AskGauravAI

The end-to-end flow we're adopting — from onboarding the brand, to content, to turning that content into leads and paying clients. Every step shows what happens for AskGauravAI and exactly which agent, model, dashboard screen, and approval gate is involved.

Sample brand: @askgauravai · ICP: D2C founders, ecom owners, agencies running Meta ads · Products: Reporting Project ₹2.5–7k → Grid Control ₹30–50k · Generated 9 Jun 2026 · Internal (admin view)

THE BIG PICTURE — TWO LOOPS, ONE BRAIN

An agency really runs **two** connected loops. Grid Control runs both for AskGauravAI, and a single persistent **Brain** (per-brand memory) keeps the story continuous so nothing restarts cold.

Loop B — Delivery (make the brand grow): research → strategy → content → publish → engage → report → optimize.

Loop A — Growth (turn the audience into money): that engagement becomes DMs → leads → an audit → a sales call → a client.

The one thing that makes this different

Every morning the **Chief of Staff** (ceo-brain) hands you a single brief: *"Here's what the team did overnight, here's what needs your yes/no, here's the one decision only you can make."* You don't operate a cockpit — you approve and direct. Research shows **68%** of clients churn from *lack of proactive guidance*; this brief is that fix, built in.

LOOP B — DELIVERY, STEP BY STEP

01 Onboard the brand

SETUP

You answer a short brand questionnaire once. Grid Control writes it into the brand's permanent profile — positioning, ICP, tone, what to never say, products, competitors. This becomes the source of truth every agent reads and **never reinvents**.

ASKGAURAVAI Parent personal brand, founder-on-camera, GaryVee pillar model. Tone = direct, founder-to-founder, "show the receipts," zero-assumption. Never: hype/guru tone, fake stats, dunking on people. Intro content teases the umbrella, doesn't name sub-products yet.

INSIDE GRID CONTROL

Screen	Onboarding wizard → <code>brand_profile.json</code>
Agent	ceo-brain (sets up the brand + memory Brain)
Model	Opus 4.8 · xhigh
Output	Brand profile + empty narrative thread ("story so far")

02 Connect the accounts

SETUP

Connect each platform once. No agent runs for the brand until its accounts are live — this is a hard rule (real data only, no guessing).

ASKGAURAVAI Instagram @askgauravai connected and post-capable (LinkedIn / YouTube / X added as they go live). Starting from 0 posts — clean slate.

INSIDE GRID CONTROL

Screen	Connections — live status per platform, never shows tokens
Stored	<code>brands/askgauravai/.env</code> (private, per-brand)
Model	none — plumbing

03 Research the market — on a schedule, cached

DELIVERY

The system scrapes real trends + competitors **weekly** and caches them. Then it generates many posts from that one cache — instead of re-scraping for every post (which was ~80% of the wasted cost). Trends are classified Fad / Micro-trend / Structural Shift, scored against the brand.

ASKGAURAVAI Scrapes competitors manthanjethwani, seanpurvis.ai, gobi_automates, garyvee + AI-marketing trends. A daily math-only check flags PIVOT / TRACK / STAY (e.g. "AI ad-fatigue spiking — ride it?").

INSIDE GRID CONTROL

Agents	trend-researcher (scrape+cluster) · trend-sentinel (daily decision)
Model	Sonnet 4.6 · sentinel = pure-math ₹0
Runs via	24x7 scheduler (no Mac needed) → <code>trends_live.json</code>
Screen	Insights / daily brief

04 Set the strategy & recon competitors

DELIVERY

Builds the 90-day roadmap and a real competitor database from actual scraped profiles — never assumed. Decides the angle, the funnel stage focus, the psychological pillars.

ASKGAURAVAI Phase 1 = Awareness + Proof. Goal = Reach + Followers. Wedge = founder building AI systems in public + real intelligence + done-for-you execution.

INSIDE GRID CONTROL

Agent	strategy-agent → <code>competitors_db.json</code>
Model	Opus 4.8 · high
Screen	The Team → Head of Strategy

05 Plan the calendar

DELIVERY

Turns strategy into a 30-day calendar — narrative arcs, trust-building slots, fatigue rules, callbacks. Every post mapped to a funnel stage and platform. GaryVee model: one pillar → many derivatives.

ASKGAURAVAI One founder-on-camera pillar (YouTube/long-form) → cut into Reels, a carousel, a LinkedIn post, an X thread — each platform-native, not copy-paste.

INSIDE GRID CONTROL

Agent	content-planner → <code>content_calendar.json</code>
Model	Sonnet 4.6
Screen	Content (calendar + pipeline)

06 Write the scripts & copy

DELIVERY

Writes hooks, scripts, captions, CTAs. Uses a hook taxonomy + virality framework, produces 3 variations from 3 different angles, runs a voice check, and flags when the founder's face or voice is required.

ASKGAURAVAI Reel script "Why your CPM doubled in 2 weeks" — flagged "*founder voice required.*" Caption in Gaurav's direct, no-fluff voice.

INSIDE GRID CONTROL

Agent	script-writer (3 variants, picks winner)
Model	Opus 4.8 · high
Screen	Content → pipeline (Drafting)

07 Create the visuals

DELIVERY

Produces the actual assets — carousels (editorial HTML→image), AI video/image, voiceover. Always makes one safe on-brand option + one viral option. The founder records to camera where flagged.

ASKGAURAVAI 7-slide carousel "3 Meta ad mistakes quietly burning your budget" rendered to AskGauravAI's template; Reel cover frame generated; founder films the talking head.

INSIDE GRID CONTROL

Agents	creative-director (video/image) · carousel-designer
Model	CD 0pus 4.8 · medium · carousel Sonnet 4.6 · media via FAL
Screen	The Team → Creative Director

08 Soul-check (brand safety)

DELIVERY

Every finished piece is checked against the brand's soul + "never say" list before it ever reaches you. Off-brand or risky content is blocked, not surfaced.

ASKGAURAVAI Kills anything hype/guru-toned, any unverifiable stat, any dunk on a named competitor — all violations of AskGauravAI's rules.

INSIDE GRID CONTROL

Agent	brand-guardian
Model	0pus 4.8 · high
Output	pass → pending_approval · fail → blocked/

09 You approve

DELIVERY

Finished drafts land in your daily brief with a real preview. One tap: Approve / Change / Publish. Chat drives intent ("make the hook punchier"); buttons guard the action.

ASKGAURAVAI "Needs you · 3 items" — the carousel, the reel script, the LinkedIn post. You approve 2, ask for a punchier hook on 1.

INSIDE GRID CONTROL

Screen	Command Center → "Needs you" hero
Flow	pending_approval/ → approved/

🔒 Human gate — nothing publishes without your yes

10 Publish

DELIVERY

Approved content posts to the right platform at the right time, automatically, from the cloud scheduler — no laptop needed to be awake.

ASKGAURAVAI Carousel + reel post to Instagram @askgauravai at the planned IST slot; same pillar's derivatives go to LinkedIn / X / YouTube.

INSIDE GRID CONTROL

Engine	per-platform publishers + publish_runner
Runs via	24x7 Railway scheduler
Screen	Content (Scheduled → Published)

► Only approved items are eligible to publish

11 Engage the community

DELIVERY

Reads comments, DMs and mentions; drafts replies in your voice. "The comment is the content" — proactive engagement is a growth channel, not chore-work. Replies wait for your OK.

ASKGAURAVAI Someone comments "how does the report work?" → a value-first reply is drafted, plus a soft nudge toward a DM conversation.

INSIDE GRID CONTROL

Agent	community-manager
Model	Sonnet 4.6
Screen	Growth → Community

► Replies need your approval · platform rate-limits respected

LOOP A — GROWTH: TURNING AUDIENCE INTO CLIENTS

This is where content becomes money. The same engagement from Loop B feeds a funnel that ends in a paying client for one of AskGauravAI's two products.

12 Capture & qualify leads

GROWTH

Two ways in: **inbound** (people DM/comment with intent) and **outbound** (the system hunts ICP-matching prospects, scores them, and DMs value-first — never a pitch). DMs convert better than link-traffic for service brands.

ASKGAURAVAI Outbound: finds D2C founders running Meta ads, scores ICP fit 1–10, opens with a specific observation about their account — not a sales line.

INSIDE GRID CONTROL

Agent dm-customer-hunter (+ prospect-researcher, outreach-writer)
Model Sonnet 4.6
Screen Growth → Lead Pipeline (scored prospects)

► Every DM approved before sending · strict platform limits

13 Nurture toward a call

GROWTH

The lead magnet is a **diagnostic** (a scorecard/mini-audit) — the highest-converting magnet in 2026 because it surfaces a real problem and positions you as the fixer. Opt-in → landing page → 5–7 email nurture → booked call. Hot leads contacted fast.

ASKGAURAVAI "Free 5-point Meta-ads intelligence check" → email sequence that shows real data thinking → invites a call. This is a teaser of the paid Reporting Project.

INSIDE GRID CONTROL

Agents funnel-specialist (journey + pages) · email-marketing-agent (sequences)
Model Sonnet 4.6
Screen Growth → Funnel & Email

► Emails approved before send

14 Audit → sell (the ascension)

GROWTH

Audit-led selling is the highest-converting motion. The cheap, productized **Reporting Project** is the foot-in-the-door audit → delivers a real, data-backed quick win → builds trust → ascends into the **Grid Control** done-for-you retainer. (Closing the call stays human — you.)

ASKGAURAVAI Reporting Project at ₹2.5–7k proves the intelligence is real → client upgrades to Grid Control execution at ₹30–50k. And that new client becomes a brand the system runs — back into Loop B.

INSIDE GRID CONTROL

Agents strategy-agent + data-analyst generate the audit · ad-strategist when paid budget is confirmed
Model Opus 4.8 · high
Human you run the call & close (the Centaur model — agents do logistics, you do the relationship)

15 Report, optimize & the Brain learns

BOTH LOOPS

Pulls real metrics (saves, save-rate, reach, engagement, sentiment), finds what's working vs dead, and feeds it back. Reporting has a cadence: weekly pulse → monthly report+video → live quarterly review. Every winning pattern is written to the Brain so next month continues, not restarts.

ASKGAURAVAI Spots that "show-the-receipts" carousels out-save talking-head reels 3x → next calendar weights toward carousels. Written to memory permanently.

INSIDE GRID CONTROL

Agents	data-analyst · performance-tracker (pure-math ₹0) → Brain
Model	analyst Sonnet 4.6
Screen	Insights (KPIs + Cost & Tokens) · Memory & Brain

What you actually do vs what the system does

The system handles ~80% of the logistics — research, drafting, scheduling, assembly, reporting. **You** do the four things only a human should: set the vision, pick the winning angle, approve before anything goes out, and run the sales call. Everything else is the team.

ONE-GLANCE MAP: EVERY STEP → AGENT → MODEL → SCREEN

#	STEP	LOOP	AGENT(S)	MODEL	DASHBOARD SCREEN
1	Onboard the brand	Setup	ceo-brain	Opus 4.8 xhigh	Onboarding wizard
2	Connect accounts	Setup	—	none	Connections
